System Sequence Diagrams

UNZA Hostel Maintenance Request and Tracking System

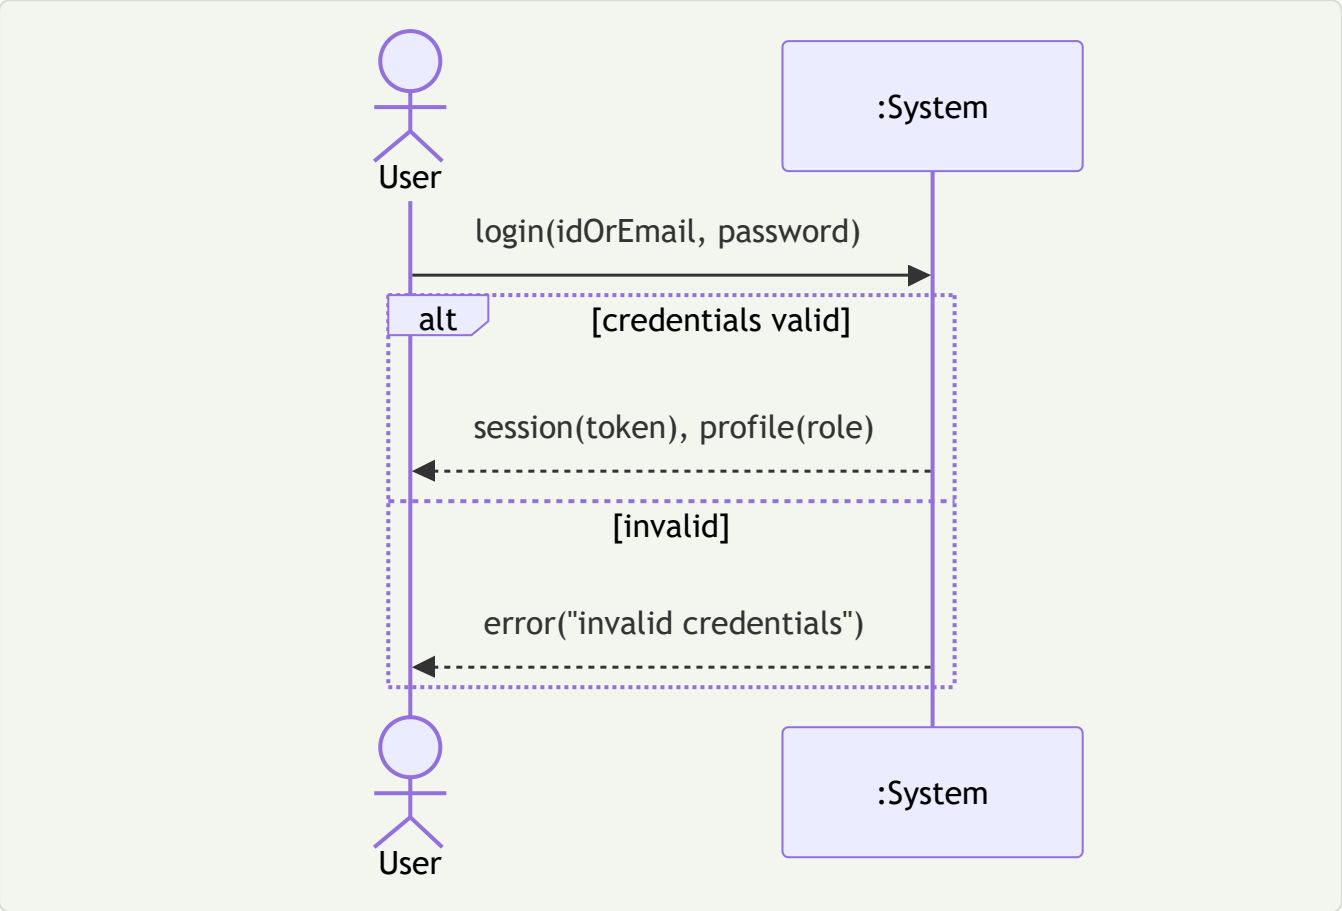

University of Zambia — Final Year Project

System Sequence Diagrams

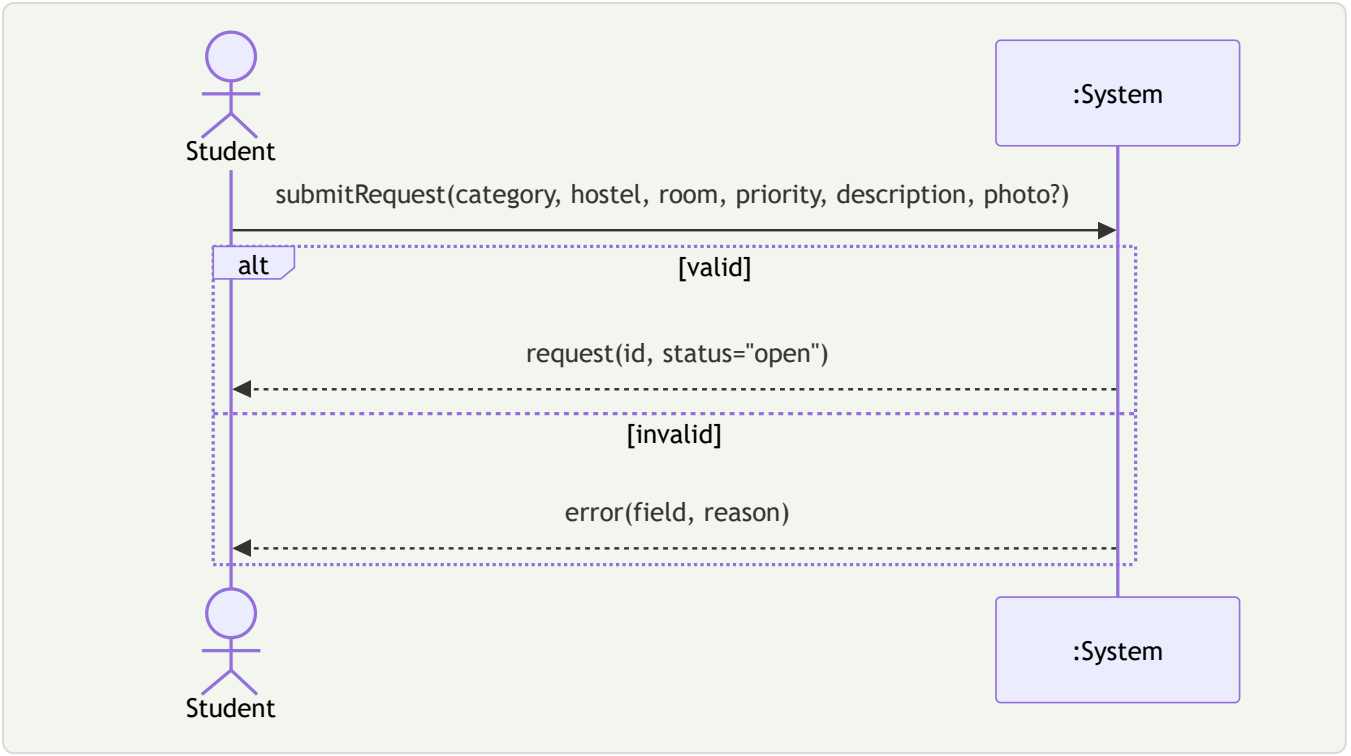

Elaboration Iteration 1 deliverable (UP), companion to USE_CASES.md. A **system sequence diagram (SSD)** treats the whole application as a single black box (`:System`) and shows only the messages that cross the actor/system boundary — no internal layers, no services, no database. That internal detail belongs to the *design* sequence diagram in LOGICAL_ARCHITECTURE.md §4, which deliberately shows the opposite: nothing *but* the internal layers, for one of the use cases below (UC-16), so the two documents are direct counterparts of each other at two different zoom levels.

One SSD per primary use case from USE_CASES.md §3 — the same 12, in the same order.

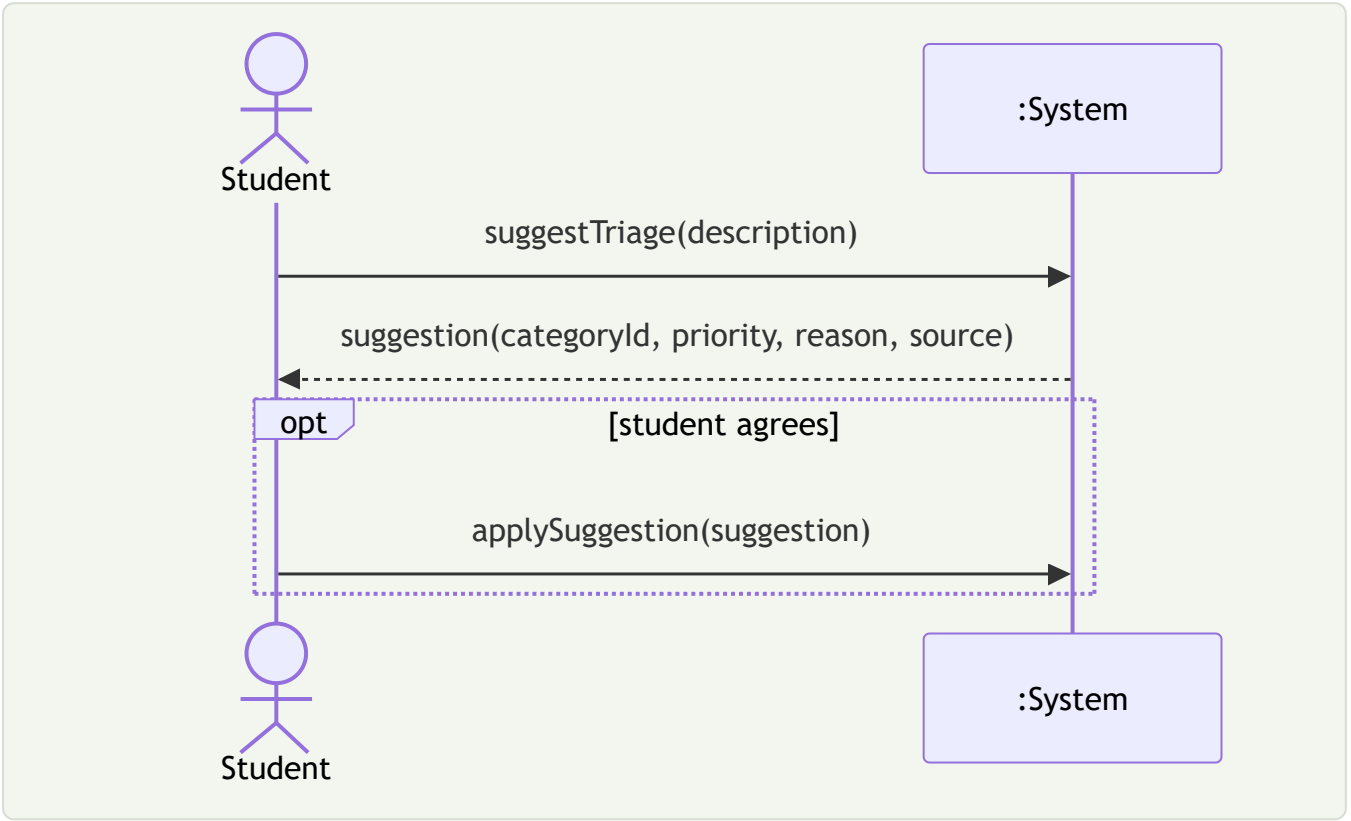

UC-2 — Log in

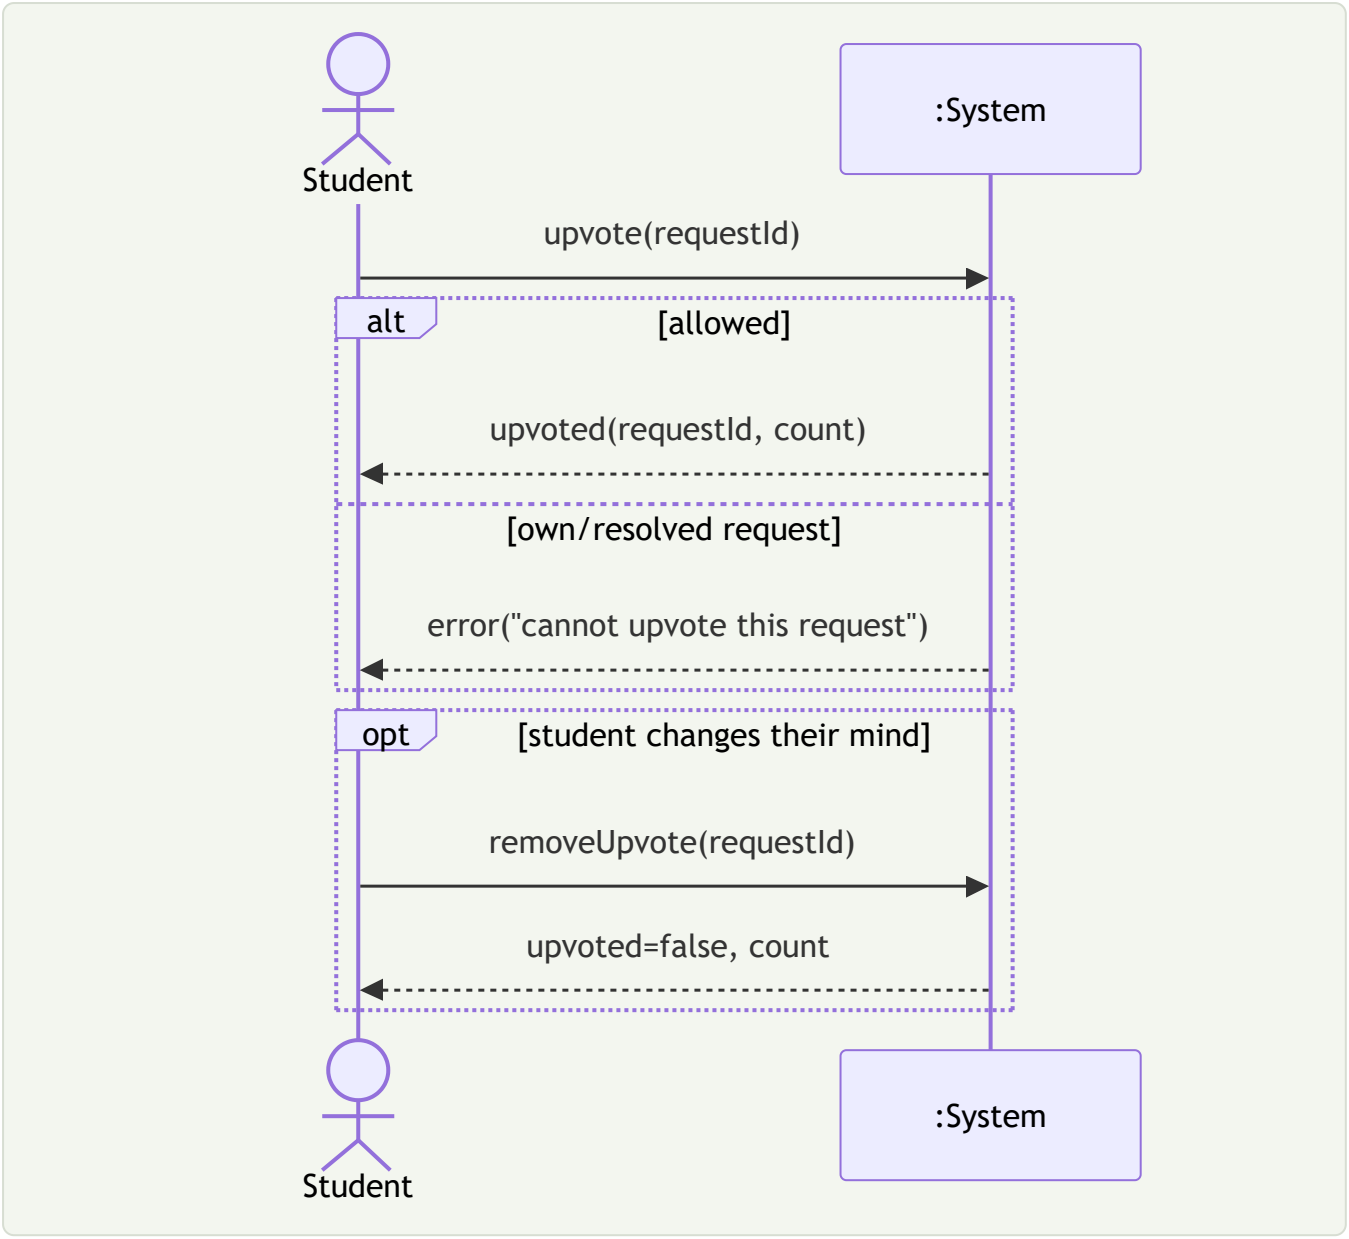

UC-3 — Submit a maintenance request

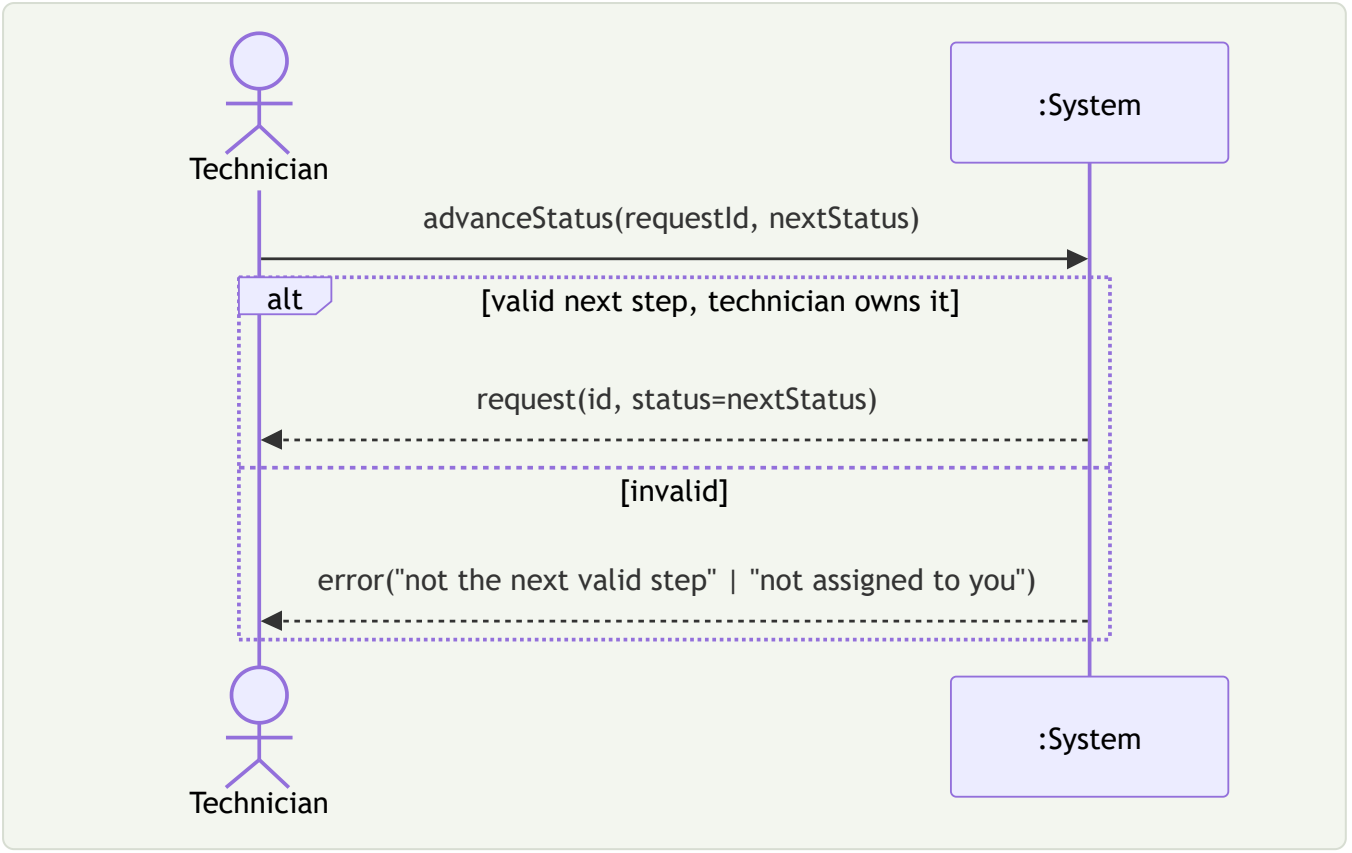

UC-9 — Get a triage suggestion

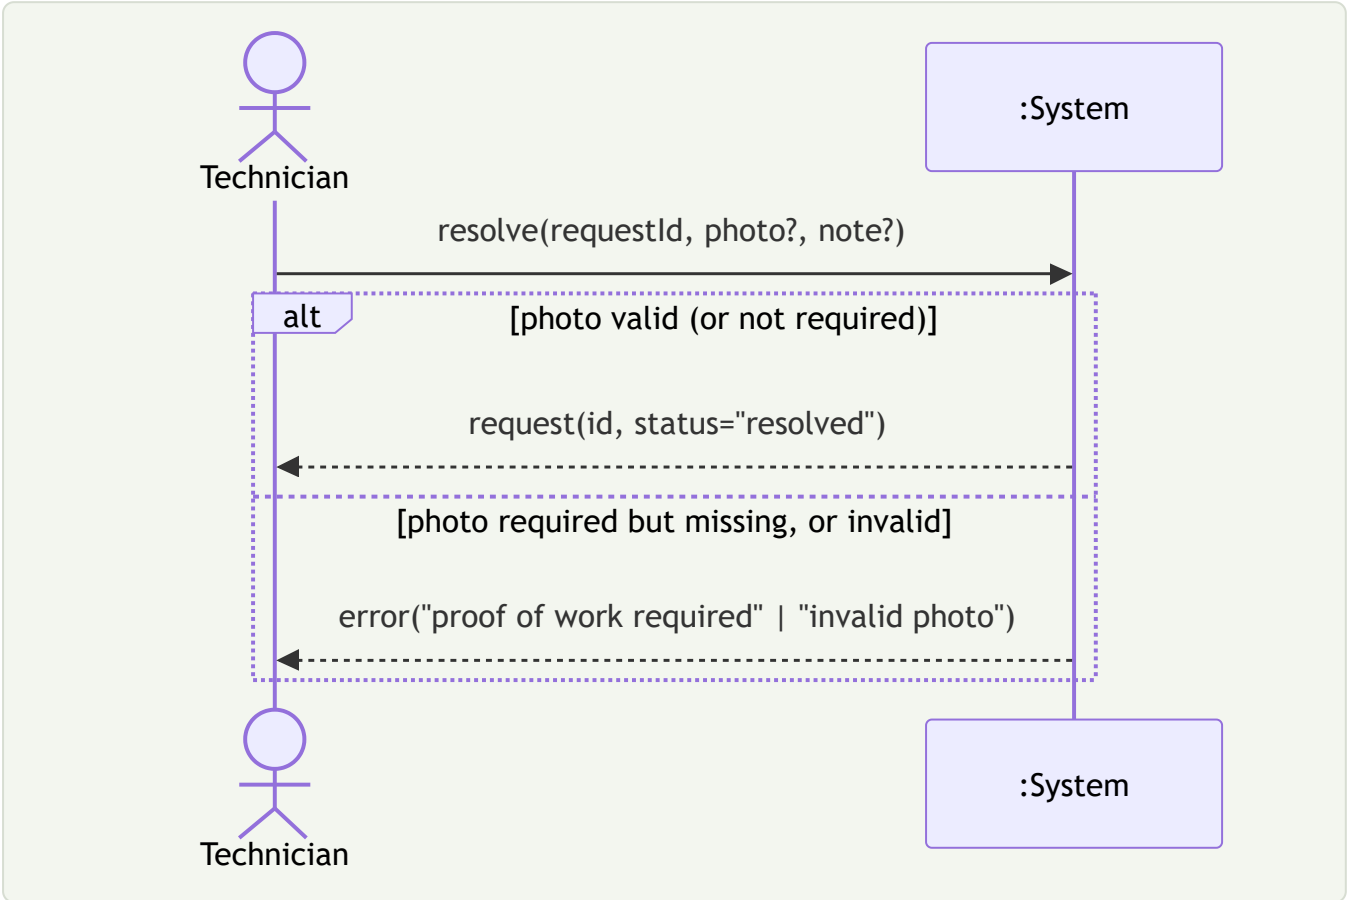

UC-6 — Back an existing report ("Me too")

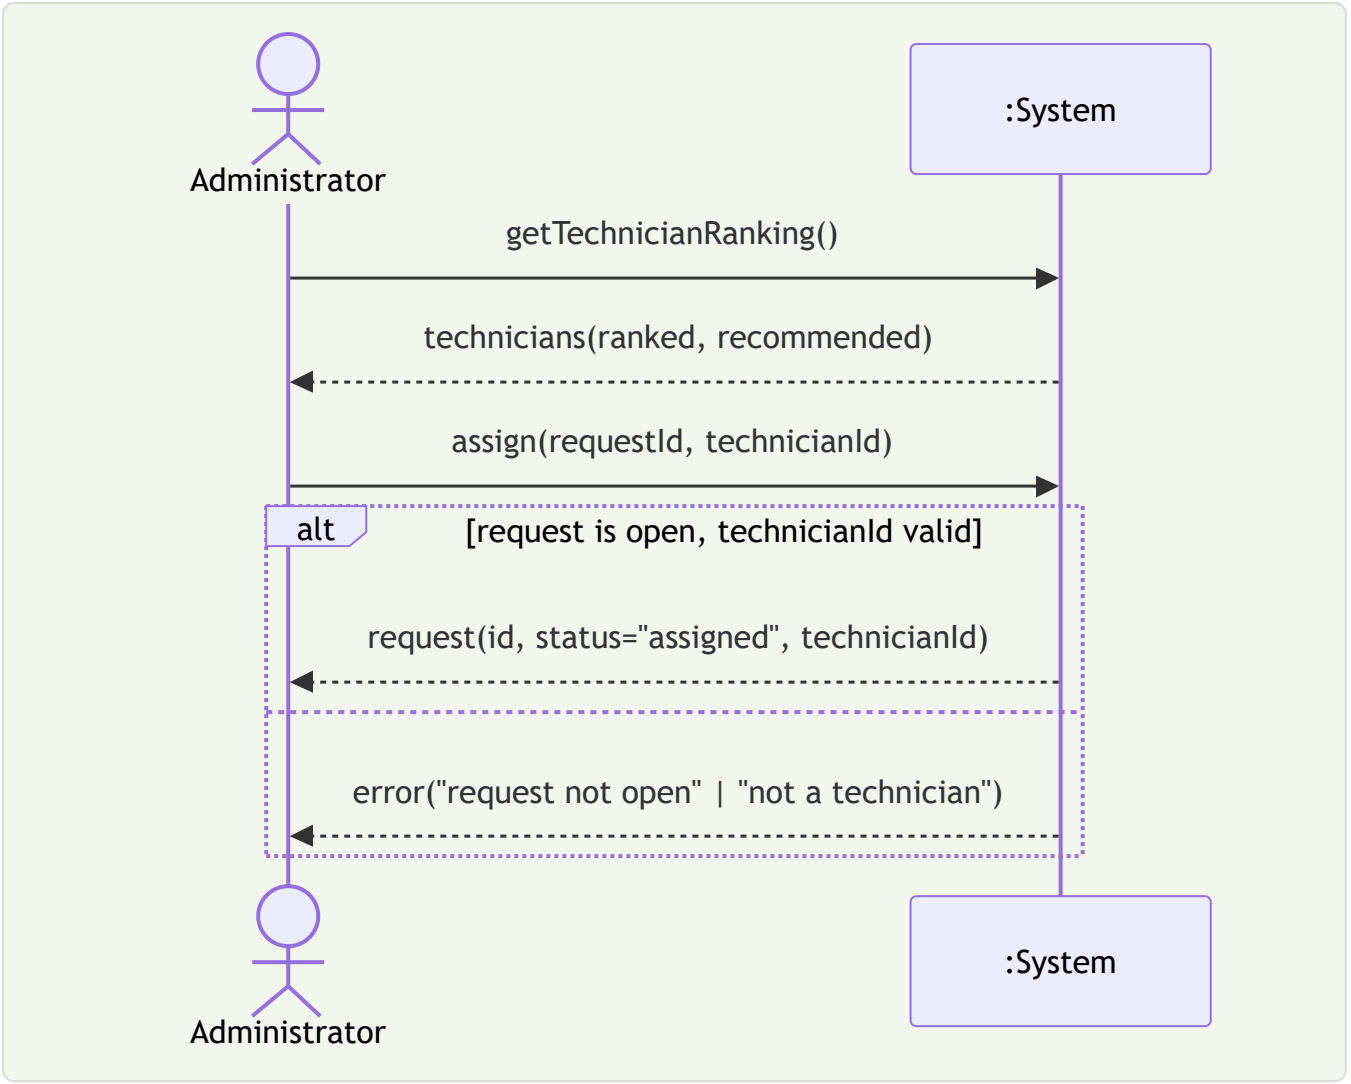

UC-16 — Update the status of an assigned request

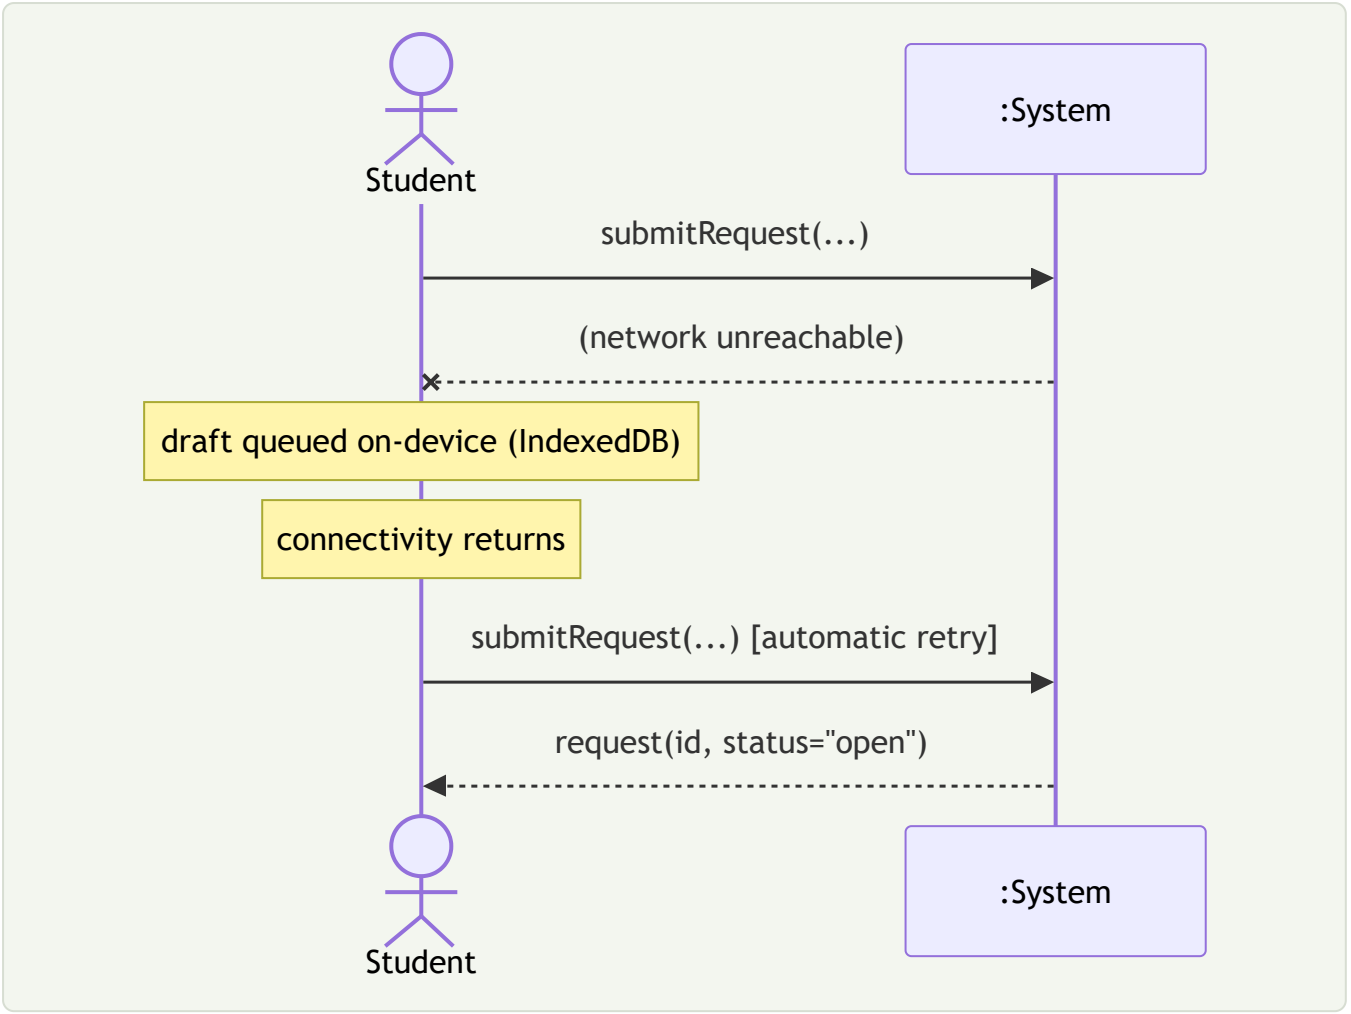

UC-17 — Attach proof of finished work

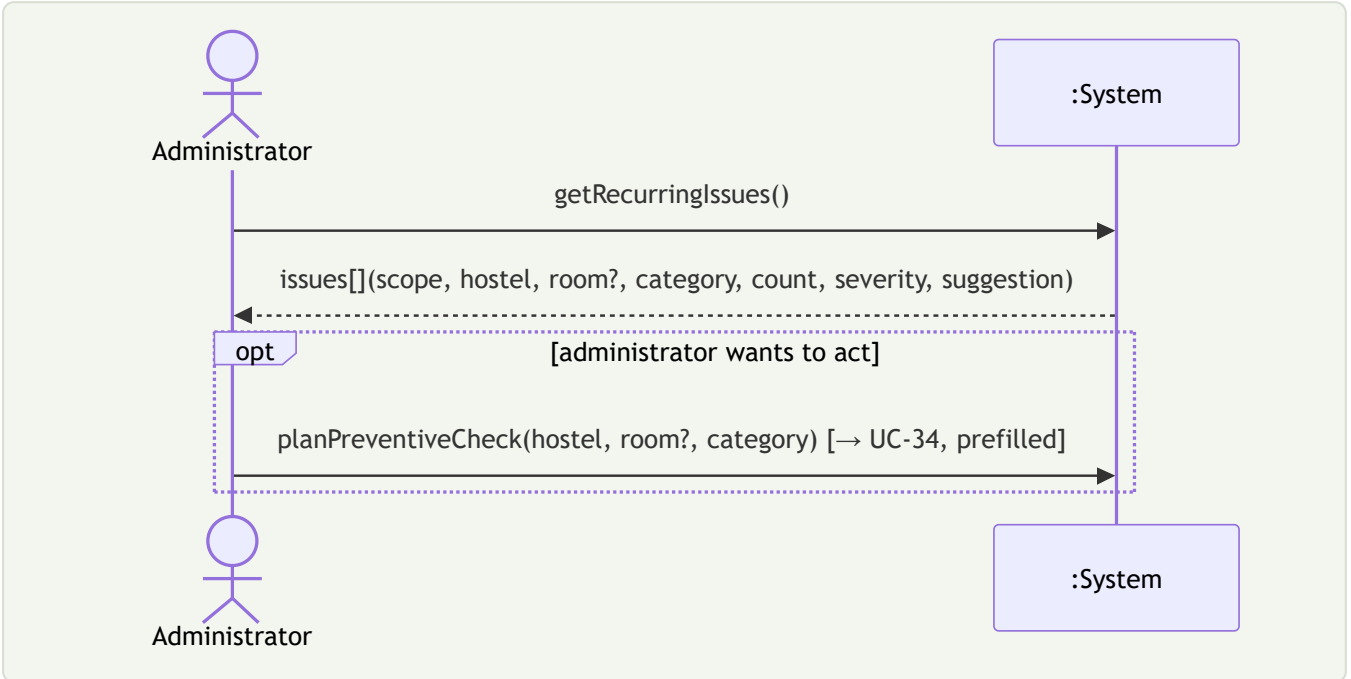

UC-23 — Assign a technician to a request

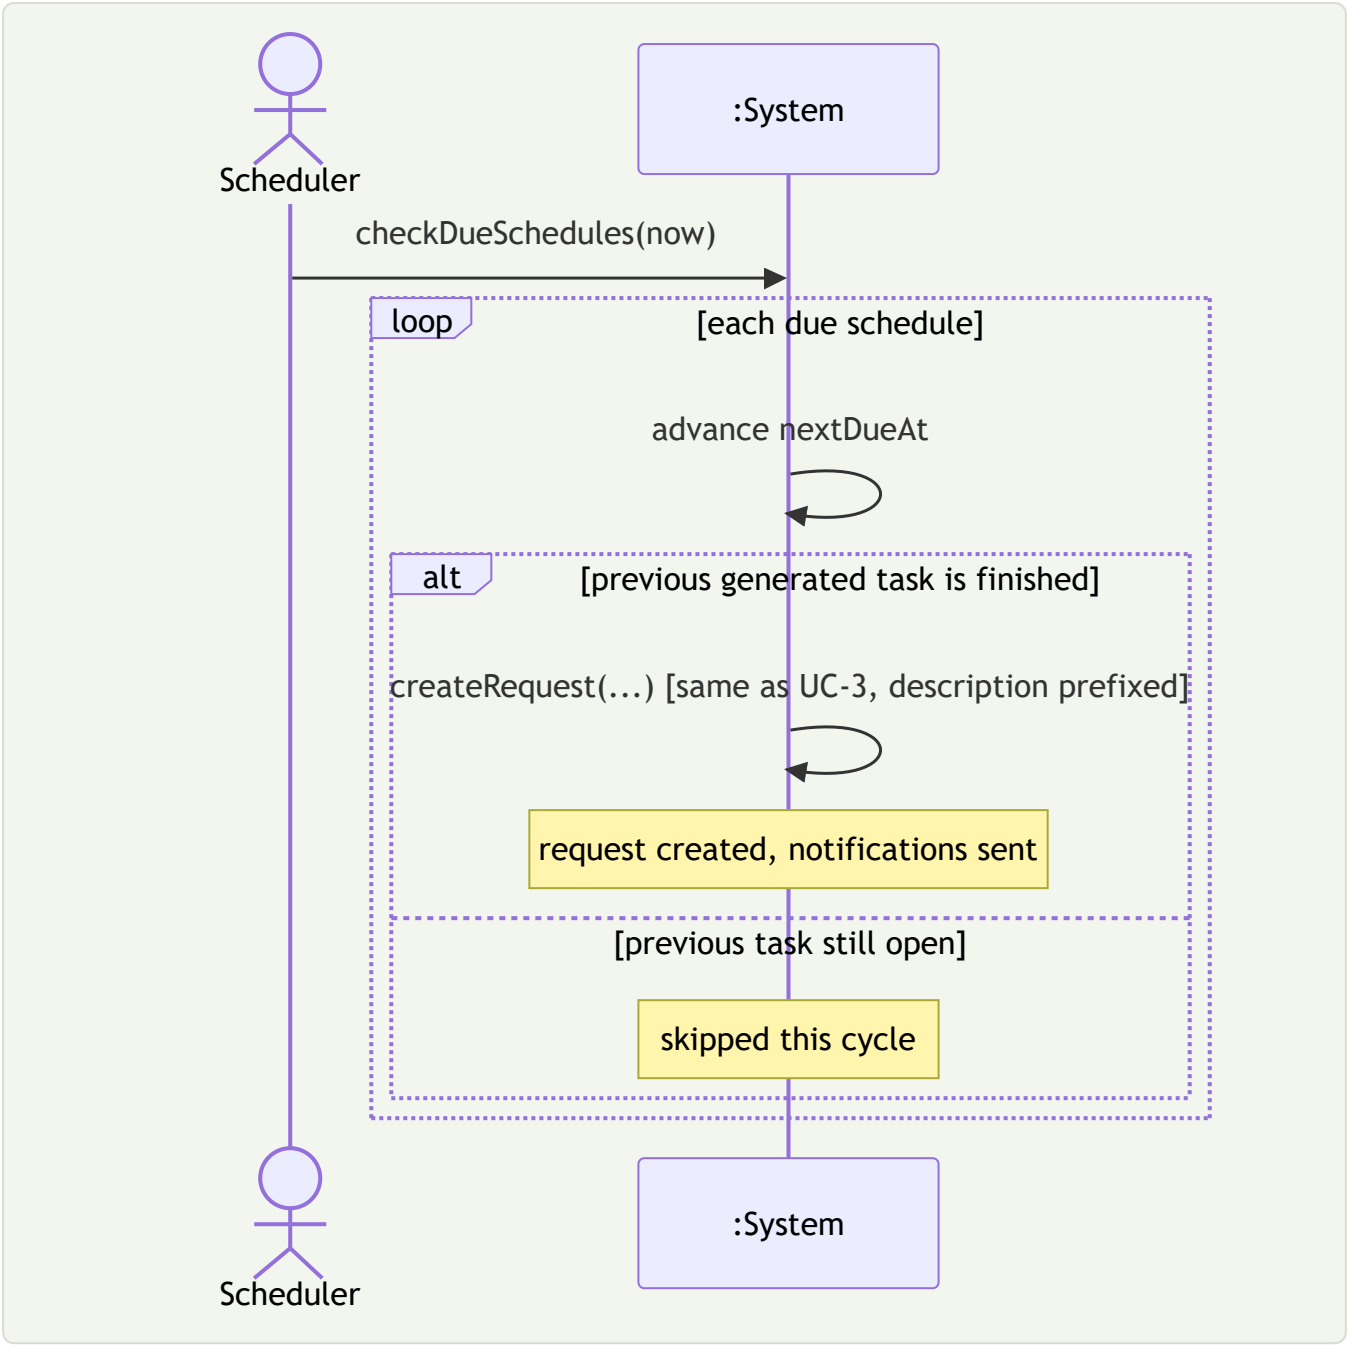

UC-10 — Draft a request offline

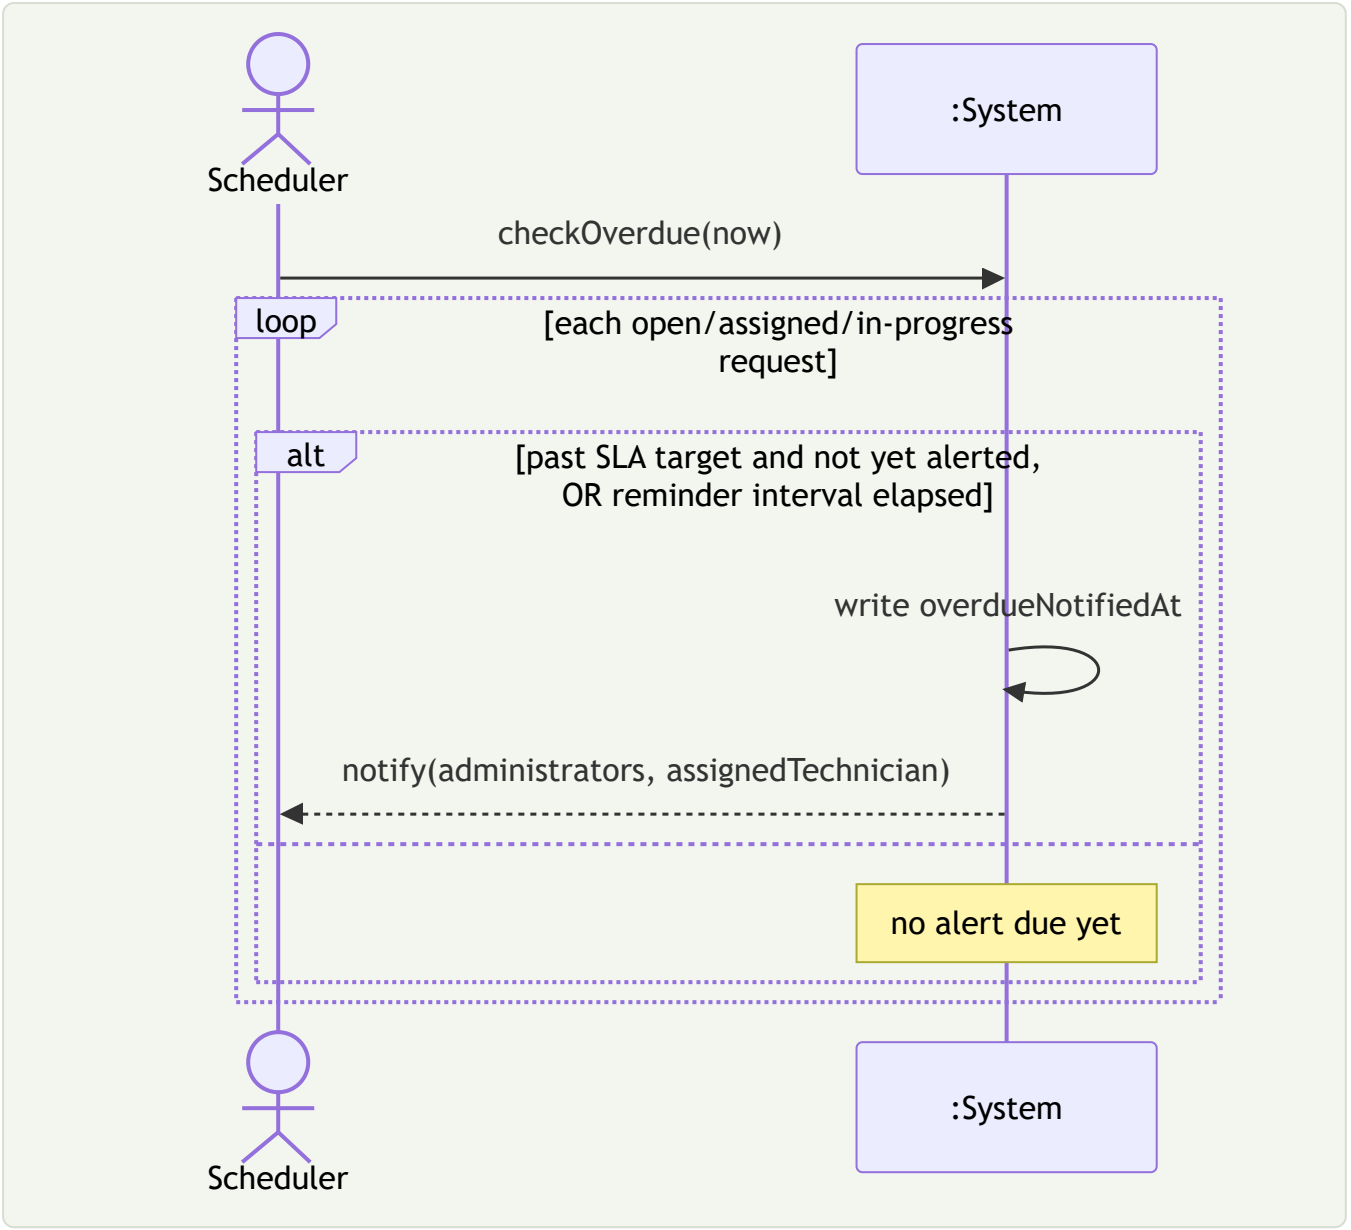

UC-31 — View recurring-issue detection

UC-38 — Generate a request when a schedule falls due

UC-39 — Detect and alert on an overdue request

UC-13 — Submit app feedback
